

” For underwater connectivity tasks requiring tailored solutions that go beyond the available standard options

SubConn® Specials

Special harness solutions with PUR cables

SubConn specialises in designing and manufacturing custom harness solutions tailored to clients' specific needs.

Key capabilities:

- Wide cable selection: Various PUR cables are used, ensuring compatibility with underwater applications
- Custom assembly: Harnesses can be configured to meet exact specifications, including conductor count and shielding
- Optimised performance: Integration of signal, power, and data within a single harness streamlines installation and improves reliability
- Client-specific solutions: Customised harnesses are created to match project requirements

Special connector solutions

In addition to custom harnesses, SubConn offers specialised connector solutions tailored to each client's technical and environmental requirements. Whether it is special sealing, custom design, or unique electrical configurations, connectors are developed to ensure optimal performance and longevity.

Key features & customisation options:

- Material selection: SubConn® connector housings can be made from various metals, such as titanium, stainless steel, standard aluminium bronze, or even PEEK, to suit specific applications
- Contact configuration: Customisable contact layouts for power, signal, or data
- Custom thread: A wide range of specialised thread options is available for seamless integration into customer equipment
- Custom body: Designed to fit specific configurations, sizes, and mounting requirements

Special connectors are available for larger quantities only. Please get in touch with us for a minimum order quantity (MOQ).

Please note that the illustrations display custom-made design examples.
